## *Award for Interior Lighting Design*

### Project at a Glance

The lighting concept on the second floor of this upscale Toronto store addresses the sculptural interior design aesthetic while rendering the luxury products as the focus. Thousands of white rods lighted from circular ceiling details illuminate a sculpture and products. Spot lamps used throughout heighten merchandise light levels with little spill light. Meanwhile, MR 16s, dimmable cold cathode and T5 lamps are used throughout for ceiling covers. In addition to commercially available products, custom brass candle-like pendants with clear 10-W xenon, 10,000-hour lamps create a flame-like effect. The design satisfied IESNA RP-2-01 guidelines; 100 footcandles on merchandise provides a dramatic contrast to circulation areas.
